User stories

Bitdefender Wallet in Bitdefender Antivirus Free edition

Epic: As a user, I want to store my credential, personal information, and bank account details in order to navigate through the internet and make online shopping in a secure manner.

Show password manager option

"As a user, I want to see easily password manager option in order to use it."

- Consider adding the wallet icon under "Protection" in the dropdown menu and at the right in the primary menu.

Option to chose

"As an user I want to manage the settings of password manager in order to keep control of what is saving or not"

- User can have the same option as in the paid version: "when to ask for master password", "autofill".

Create wallet

"As a user, I want to be able to create a new wallet in order to deposit my information."

- User can create only one wallet

Setting master password

"As a user, I want to set up a master password and a name for the wallet to be able to connect at my wallet in a secure manner.

- Please keep in mind to force the user to introduce a strong password
- Consider to make sure that the user understands that he cannot change the password and the name of wallet.

See the wallet

"As a user, I want to see the wallet I created in password manager in order to easily access it "

- Take into consideration the styling and format in the paid version

What to store in the wallet

"As a user, I want to see what I can store in order to know what I can save"

- User can only have only "Web pages" and "Online banking".

Number of items can you add

"As a user, I want to know how many items I can add in order to prioritize accounts I save"

- User can have only 5 items in web pages, and 1 item in Online banking

Adding elements

"As a user, I want to have the option to add items manually but I also want to add automatically in order to simplify the process of saving credentials."

- Consider importing the features from the paid versions
- Please take in consideration to ask the user what accounts he want to save when automatically mode is activated

Bitdefender

2.

Autofill

"As a user, I want my credentials to be auto-filled on a previously saved web page in order to simplify the process.

- Consider importing this feature from the paid version

Delete

"As a user, I want to have the options to eliminate items from the wallet in order to make room for new accounts."

- User cannot delete the entire wallet.
- Consider even to suggest to the user what accounts he/she should delete or close based on the last activity (when he/she doesn't use that account for months)

Secure the wallet

"As a user, I want to secure my wallet every time my computer enters sleep mode or I m inactive for a specific amount of time in order to protect my passwords when I m away from my computer"

- Please take into consideration to let the user enter the amount of time after the wallet is automatically secured and will need the master password to reopen.

Generate strong password

"As a user, I want a password generator when I'm creating a new account in order to avoid common mistakes in choosing a password and have a unique one "

- Consider making a simple password generator that generates random arrays of characters.
- Please take into consideration to ask the user if he wants to save the new account. If the size is full please let the user know he can get more space if he subscribes to the paid version.
